SUMMARY

Software Engineer with expertise across Full Stack development. Early startup experience in product lifecycles from PRD/HLD/LLD system design to deployment, building scalable SaaS platforms, and engineering zero trust cloud architectures.

EDUCATION

University of Engineering and Management, Kolkata **August 2022 – June 2026**
*Bachelor of Technology in Computer Science and Technology (CGPA: **7.50 / 10.0**)* *Kolkata, West Bengal*

EXPERIENCE

iTelematics Software Pvt. Ltd. **July 2026 – Present**
Software Engineering & Technical Lead Intern *Bengaluru, Karnataka*

- Spearheaded system architecture (HLD/LLD) and contributed to PRDs/BDAs for Desktop and Cloud SaaS platforms, completing sprint cycles in JIRA to deliver production features on schedule.
- Engineered high throughput microservices using Hono.js, Cloudflare Workers, Wrangler, D1, and R2 distributed object storage, achieving under 50ms p99 latency across edge nodes.
- Implemented secure Identity & Access Management (IAM), RBAC authorization policies, and automated threat modeling across desktop applications and cloud services.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C, C++, SQL, Bash, PowerShell
Web & Edge Development: Next.js, React.js, Node.js, Express.js, Electron, REST APIs, Tailwind CSS
Databases & Cloud: PostgreSQL, Cloudflare D1/R2, Miniflare, MongoDB, Supabase, Prisma ORM, Elasticsearch, Docker
Security & Systems (IAM/SOC): Zero Trust, Microsoft Entra ID, Active Directory, RBAC, OAuth2/OIDC, Splunk, Sysmon, Winlogbeat, Threat Modeling
Architecture & Tools: System Design (HLD/LLD), PRD/BDA, Git, GitHub Actions, CI/CD, Wrangler, Postman, Inngest, Kali Linux/Unix

PROJECTS

Loonist | *Electron, React, TypeScript, SQLite, ONNX Runtime* **August 2026 – Present**

- Engineered an offline first Electron desktop platform in a startup automating First Article Inspection (FAI) for aerospace and precision manufacturing companies, pairing a local ONNX OCR engine with an ASME Y14.5 GD&T parser using regex to auto extract blueprint tolerances at 95%+ accuracy.
- Architected the product's licensing and audit backbone using Ed25519 signed offline licenses via Cloudflare Workers and D1, a SQLite WAL undo redo engine, and a SHA-256 tamper evident ledger across an 8 sprint roadmap.

Nexora SIEM | *Next.js, Python, Elasticsearch, Scikit learn, Docker* **April 2026 – May 2026**

- Engineered an AI driven SIEM platform collecting, normalizing, and analyzing security logs to deliver real time threat visibility via rule based heuristics and attack chain correlation.
- Implemented an interactive SOC dashboard with live alert streaming, UEBA behavioral anomaly detection, and automated risk scoring, cutting alert fatigue by 45%.

Synex | *React, Node.js, Express, PostgreSQL, Prisma, Inngest* **May 2026 – June 2026**

- Developed a full stack personal finance application with dynamic multi category budgeting, real time transaction tracking, and Clerk authentication.
- Architected an asynchronous event driven Inngest fan out pipeline dispatching weekly AI financial summaries via Resend API.

Entra Zero Trust IAM | *Entra ID, Active Directory, PowerShell, Graph API* **June 2026 – July 2026**

- Architected a hybrid IAM lab enforcing Zero Trust Conditional Access (MFA, geo blocking) and automated JML lifecycle for 100+ identities via PowerShell.
- Automated User Access Reviews (UAR) and Non Human Identity (NHI) governance using Microsoft Graph API, remediating 50+ orphaned service principals.

CERTIFICATIONS

- **IBM Professional Certifications:** Introduction to Cloud Computing and Introduction to Cybersecurity.
- **The Complete Web Development Bootcamp:** Certified in full stack web engineering , microservices

ACHIEVEMENTS

- **First Place, Technical Debate Competition:** Defended arguments on human expertise versus AI automation in threat detection and cyber incident response.
