PROFESSIONAL SUMMARY

Information Technology student with hands-on cybersecurity experience across security operations, web security, network reconnaissance, malware triage, and digital forensics. Worked with Wazuh, Sysmon, Windows Event Logs, Nmap, Burp Suite, Wireshark, YARA, and MITRE ATT&CK through an industry-mentored cybersecurity lab and a cybersecurity internship. Skilled in Python-based security automation, endpoint telemetry analysis, and technical security documentation.

SKILLS

- **Security Operations & Detection:** Wazuh, Sysmon, Elastic Stack, Security Information and Event Management (SIEM), Windows Event Logs, Log Correlation
- **Offensive Security:** Nmap, Burp Suite, OWASP ZAP, DIRB, Network Reconnaissance, Directory Enumeration, Web Security
- **Digital Forensics & Incident Response (DFIR):** MITRE ATT&CK Mapping, IOC Analysis, Endpoint Telemetry, Persistence Analysis, Forensic Artifact Analysis
- **Malware Analysis:** Static Analysis, YARA Rules, PE Analysis, Malware Triage
- **Network Analysis & OSINT:** Wireshark, TCP/IP, DNS, HTTP/S, Maltego, Shodan, Google Dorks
- **Programming & Environment:** Python, Java, JavaScript, Linux CLI, Windows, VirtualBox

EXPERIENCE

Cyber Security Intern - ShadowFox | Remote | Jul 2026 (1 month)

- Performed security assessments and vulnerability scans on target web applications using Nmap, DIRB, and Wireshark.
- Analyzed network traffic to identify unencrypted credential transmissions and highlight key security risks.
- Conducted directory enumeration to discover hidden file paths and assess potential information disclosure vulnerabilities.
- Documented technical findings with risk severities, impacts, and actionable mitigation strategies.

Lab Member - Cybersecurity Vertical - School of Innovation, KGISL Institute of Technology | Aug 2025 - Present

- Performed hands-on offensive and defensive security activities under mentorship from BlackPerl DFIR engineers and consultants.
- Deployed Wazuh and Sysmon to collect endpoint telemetry and monitor security events; analyzed Windows/Linux logs for threat hunting and MITRE ATT&CK mapping.
- Conducted OSINT investigations using Maltego, Shodan, and Google Dorks for reconnaissance and intelligence gathering.
- Performed network reconnaissance and traffic analysis using Nmap and Wireshark.

Volunteer CTF Challenge Developer - UNI6CTF | Jul 2026 - Present

- Designing technical CTF challenges in Web Exploitation; writing documentation, flag verification logic, and walkthroughs.

PROJECTS

Automated Malware Triage Kit (AMTK) | GitHub

- Developed a Python-based malware triage utility integrating YARA scanning, PE analysis, and MITRE ATT&CK mapping.
- Automated suspicious executable classification and generated investigation-oriented analysis output.

Windows Persistence & Forensic Investigation | LinkedIn Write-up

- Investigated suspicious Defender exclusions, typo-squatted binaries, and persistence mechanisms on a Windows workstation.
- Performed forensic artifact analysis using Amcache, Registry analysis, USN Journal parsing, and VirusTotal correlation; conducted remediation and integrity validation using Microsoft Defender Offline Scan, DISM, and SFC.

Cybersecurity CTF Write-ups | GitHub

- Published technical writeups documenting Capture The Flag challenge-solving methodologies involving Cryptography, Web Exploitation, and investigative workflows.

COMMUNITY INVOLVEMENT

OWASP Coimbatore Chapter & DCG Coimbatore Chapter: Attended CTFs and workshops on LLM security, prompt injection, adversarial attacks on LLMs, DevSecOps, reverse engineering, malware analysis, web pentesting, and digital forensics.

EDUCATION

Bachelor of Technology in Information Technology | KGiSL Institute of Technology, Coimbatore | Expected 2028

CERTIFICATIONS

- **Google:** Cybersecurity Foundation, Network Security, Linux & SQL (Coursera) |
- **IBM:** Operating Systems Security, Ethical Hacking (Coursera) |
- **Packt:** Nmap for Penetration Testing (Coursera) |
- **Cambridge Linguaskill Business** – English: **C1** (Reading **C2**)
